

דגון בתי-ממגורות לישראל בע"מ
DAGON BATEY-MAMGUROTH LE-ISRAEL LTD.

Date: 07/Jan/2007

Dear Moshe

As DAGON Batey-Mamguroth Le-Israel Ltd is the main port grain terminal in Israel, the company operation and maintenance activities are very significant to the food and feed market.

The principal of using preventive and predictive maintenance is main principal of our service policy in order to reduce stoppage time and breakdown events.

8 years ago, we thoroughly examined several maintenance-software, and the decision to choose POWER 10 was very clear to us, because POWER 10 is the only software that gives us the **pure** features of preventive maintenance.

After 8 years experience using POWER 10, without a doubt we conclude that by using it we succeeded among others the following:

- Reducing maintenance direct costs.
- Reducing spare-parts store stock.
- Reducing breakdown events numbers.
- Expanding the MTBF.
- Improving the ability to identify problematic equipment.

We warmly recommend POWER 10, especially to companies that preventive maintenance is one of their bases

Eli Doron
