To Power 10

Unilever Corp. had purchased **Power10 Dot net** as a CMMS (computerized maintenance management system) more than eight years ago, and since then all the issues related to corrective/preventive maintenance as well as inventory and purchasing is managed by using Power10 software.

I would like to emphasize the fact that there are different specialized departments in our organization and in order for each department to view its relevant data, we constantly use the compartmentalization feature of the software, additionally it is appropriate to indicate our vast use of the OLAP feature that enables our managements to analyze any data desired, by clicking and dragging the desired data to become one of the cube dimension, the use of the feature is a user friendly and easy to perform as well as the fact that the result are given within a fraction of seconds even though it is a multidimensional analysis for the shared data in our organization.

Another important tool in the system are the weekly reports that are produced for the management meetings to evaluate the maintenance status as well as the extent of spending on spare parts, human resource etc. efficient management decisions as well as operational decisions are made according to these reports.

Recently our organization started using barcode equipments and **Power10 Dot net** software support the use of such equipment and make it easy to work with.

In general we are very satisfied with **Power10 Dot net** in our organization, the software is very flexible to meet our organization unique requirements as well with the technical support staff in **Power10 Dot net** who are always available to help us with the different issues raise.

I highly recommend to any other company to use POWER 10, and I'm sure that within a short time, one year or two, the revenue will cover all expenses using this package, and after that – the sky is the limit.

Sincerely yours,

Tamir Alon  
IT Unilever Israel  
System administrator
